

## **TA1 Reactor Development and Plant Optimization Q&A Transcript**

Q: Would a multifunctional sensor developed for SFRs that is being adapted to molten salt be more appropriate for Topic Area 1 or Topic Area 9?

A: It could be applicable to Topic Area 1 because we are trying to reduce technical risk for advanced reactors including SFRs and MSR. It could also apply to Topic Area 9 as sensor development. Applicants shouldn't worry too much about which area they submit to, as if the program managers feel it would fit better under a different topic area they can move it with the applicant's permission.
